## **Unit-1 (Complex Variable: Differentiation)**

Limit, Continuity and differentiability, Functions of complex variable, Analytic functions, Cauchy- Riemann equations (Cartesian and Polar form), Harmonic function, Method to find Analytic functions, Conformal mapping, Mobius transformation and their properties.

## **Unit-2 (Complex Variable: Integration)**

Complex integrals, Contour integrals, Cauchy- Goursat theorem, Cauchy integral formula, Taylor's Series, Laurent series, Liouville's Theorem, Singularities, zero of analytic function, Residues, Method of finding residues, Cauchy Residue's theorem, Evaluation of real integral of the type and

## **Unit-3 (Partial Differential Equation and its Applications)**

Introduction of partial differential equations, Second order linear partial differential equations with constant coefficients.

Classification of second order partial differential equations,

Method of separation of variables for solving partial differential equations, Solution of one and two dimensional wave and heat conduction equations.

## Unit-4 (Numerical Techniques)

Error analysis, Zeroes of transcendental and polynomial equations using Bisection method, Regula-falsi method and Newton-Raphson method, Interpolation: Finite differences, Newton's forward and backward interpolation, Lagrange's and Newton's divided difference formula for unequal intervals. Solution of system of linear equations, Crout's method, Gauss- Seidel method. Numerical integration: Trapezoidal rule, Simpson's one third and three-eighth rules, Solution of 1<sup>st</sup> order ordinary differential equations by fourth-order Runge- Kutta methods.

## Unit-5 (Aptitude-III)

Time & Work, Pipe & Cistern, Time, Speed & Distance, Boat & Stream, Sitting Arrangement, Clock & Calendar.

# Branch Wise Applications

- Concept of Complex variable is used in speech recognition, image processing etc.
- Function of complex variable helps in evaluation of area, which is required in many physical formulation.

# Course Objective

The objective of this course is to familiarize the engineers with concept of function of complex variables, complex variables & their applications, Integral Transforms for various mathematical tasks and numerical aptitude. It aims to show case the students with standard concepts and tools from B. Tech to deal with advanced level of mathematics and applications that would be essential for their disciplines. The students will learn:

- The idea of function of complex variables and analytic functions.
- The idea of concepts of complex functions for evaluation of definite integrals
- The concepts of concept of partial differential equation to solve partial differential and its applications.

# Course Objective

- The concept of finding roots by numerical method, interpolation and numerical methods for system of linear equations, definite integral and 1<sup>st</sup> order ordinary differential equations.
- The concept of problems based on Time & Work, Pipe & Cistern, Time, Speed & Distance, Boat & Stream, Sitting Arrangement, Clock & Calendar.

# Course Outcome

- **CO1:** Apply the working methods of complex functions for finding analytic functions.
- **CO2:** Apply the concepts of complex functions for finding Taylor's series, Laurent's series and evaluation of definite integrals.
- **CO3:** Apply the concept of partial differential equation to solve complex variables and problems concerned with partial differential equations

# Course Outcome

- **CO4:** Apply the concept of numerical techniques to evaluate the zeroes of the Equation, concept of interpolation and numerical methods for various mathematical operations and tasks, such as integration, the solution of linear system of equations and the solution of differential equation.
- **CO5:** Solve the problems of Time & Work, Pipe & Cistern, Time, Speed & Distance, Boat & Stream, Sitting Arrangement, Clock & Calendar.

# Program Outcomes

S.No	Program Outcomes (POs)
PO 1	Engineering Knowledge
PO 2	Problem Analysis
PO 3	Design/Development of Solutions
PO 4	Conduct Investigations of Complex Problems
PO 5	Modern Tool Usage
PO 6	The Engineer & Society
PO 7	Environment and Sustainability
PO 8	Ethics
PO 9	Individual & Team Work
PO 10	Communication
PO 11	Project Management & Finance
PO 12	Lifelong Learning

# CO-PO Mapping(CO1)

# Program Educational Objectives(PEOs)

**PEO-1:** To have an excellent scientific and engineering breadth so as to comprehend, analyze, design and provide sustainable solutions for real-life problems using state-of-the-art technologies.

**PEO-2:** To have a successful career in industries, to pursue higher studies or to support entrepreneurial endeavors and to face the global challenges.

**PEO-3:** To have an effective communication skills, professional attitude, ethical values and a desire to learn specific knowledge in emerging trends, technologies for research, innovation and product development and contribution to society.

**PEO-4:** To have life-long learning for up-skilling and re-skilling for successful professional career as engineer, scientist, entrepreneur and bureaucrat for betterment of society.

# End Semester Question Paper Template

- [100 Marks Question Paper Template.docx](#)

# Prerequisite and Recap(CO1)

- Knowledge of differentiation
- Knowledge of real valued function

# Brief Introduction about the subject with videos

- We will discuss properties of complex function ( limits, continuity, differentiability, Analyticity and integration)
- In 3<sup>rd</sup> module we will discuss application of partial differential equations
- In 4<sup>th</sup> module we will discuss numerical methods for solving algebraic equations, system of linear equations, definite integral and 1<sup>st</sup> order ordinary differential equation.
- In 5<sup>th</sup> module we will discuss aptitude part.
- <https://youtu.be/iUhwCfz18os>
- <https://youtu.be/ly4S0oi3Yz8>
- [https://youtu.be/f8XzF9\\_2ijs](https://youtu.be/f8XzF9_2ijs)

# Unit Content

- Limit, Continuity and differentiability
- Functions of complex variable,
- Analytic functions
- Cauchy- Riemann equations (Cartesian and Polar form),
- Harmonic function
- Method to find Analytic functions
- Conformal mapping
- Mobius transformation and their properties.

# Unit Objective(CO1)

- The objective of this course is to familiarize the engineers with concept of function of complex variables. It aims to show case the students with standard concepts and tools from B. Tech to deal with advanced level of mathematics and applications that would be essential for their disciplines.

# Topic Objective(CO1)

- Gain some basic knowledge of complex numbers, complex plane, region in complex plane.

## Complex Variables

## Complex Numbers:

A number of the form  $a + bi$ , where  $a$  and  $b$  are real numbers and  $i$  is called a complex number and is denoted by  $z$ .

It is also denoted by an ordered pair  $(a, b)$ . Thus  $z = a + bi$  or  $z = (a, b)$ .

- The set of complex numbers is denoted by  $\mathbb{C}$
- If  $z$  is a complex number, then  $a$  is called the real part of  $z$  and denoted by  $\text{Re}(z)$ .
- $b$  is called the imaginary part of  $z$  and is denoted by  $\text{Im}(z)$ .
- If  $a = 0$  and  $b \neq 0$  then  $z$  is called a purely imaginary number

# Complex variables(CO1)

- If  $z = x$  and  $y = 0$  then  $z$  is called a real number
- If  $z = 0$  and  $y = 0$  then  $z$  is the zero complex number

## Conjugate Complex Number:

If two complex numbers differ only in the sign of the imaginary part then they are called conjugate complex number

- The conjugate of complex number  $z = x + iy$  is denoted by  $\bar{z} = x - iy$
- The conjugate of real number is real number itself.
- If  $z = x + iy$  then  $\bar{z} = x - iy$

# Complex variables(CO1)

- If  $z_1$  then and
- If  $z_2$  then

**Sum, difference and product of any two complex number is a complex number.**

- If  $z_1$  and  $z_2$  then their

**Sum:**

**Difference:**

**Product:**

## Polar form of complex numbers:

Let P be the point which represent

Let OP and

Then from

and

$r$  is called the absolute value or the modulus of and is denoted by

.

# Complex variables(CO1)

- Geometrically, is the distance of point from the origin.
- is called the argument of or amplitude of .
- It is denoted by  $\arg$  or Amp

$\arg$

- is the directed angle from the positive to OP

## Laws of complex numbers:

If  $z_1$  and  $z_2$  are two complex numbers, then

### **Triangle Inequality:**

### **Parallelogram Inequality:**

# Complex variables(CO1)

## Curves and regions in complex plane

### **Distance between two complex numbers :**

The distance between two complex number and is given by or

**Circles :** A circle with centre and is represented by

### **Interior and exterior part of the circle :**

The set indicates the interior part of the circle whereas indicates the exterior part of the circle

# Complex variables(CO1)

**Circular Disc:** The open circular disc with centre  $z_0$  and radius  $r$  is given by .

The close circular disc with centre  $z_0$  and radius  $r$  is given by

**Neighbourhood:** A open neighbourhood of a point  $z_0$  is a subset of  $\mathbb{C}$  containing an open circular disc centered at  $z_0$

**Annulus :** The region between two concentric circle with Centre  $z_0$  and  $r_1, r_2$  can be represented by  
such a region is called open circular ring or open annulus.

# Complex variables (CO1)

**Opened set:** Let  $S$  be a subset of  $\mathbb{C}$ . It is called an open set if for each point  $z \in S$  there exists an open circular disk centered at  $z$  which is included in  $S$ .

**Closed set :** A set  $S$  is called closed if its complement is open.

**Connected set:**

A set  $A$  is said to be connected if any two points of  $A$  can be joined by finitely many line segments such that each point on the line segment is a point of  $A$ .

# Complex variables(CO1)

**Domain:** A open connected set is called domain.

**Region:** It is a domain with some of its boundary points.

**Closed region:** It is a region together with a boundary points.

**Bounded region:** A region is said to be bounded if it can be enclosed in a circle of finite radius.

# Recap(CO1)

- Complex variables.
- Curves and region in complex plane

# Topic Objective(CO1)

- We will discuss properties of a complex function which enables us when limit exist? When function is continuous as well as differentiable and analytic?

# Function of complex variable(CO1)

**Complex function:** If  $z$  and  $w$  are two complex variables and if to each point  $z$  of region  $R$  there corresponds at least one point  $w$  of a region  $R$  we say that  $w$  is a function of  $z$  and we write

- If for each value of  $z$  in a region  $R$  of the  $z$ -plane there corresponds a unique value for  $w$  then  $w$  is called single valued function.

E.g .  $w = z^2$  is a single valued function of  $z$ .

# Function of complex variable(CO1)

## Multi-valued function:

If for each value of  $z$  if more than one value of  $w$  exists then  $w$  is called multi-valued function.

E.g .

- where  $u$  and  $v$  are known as real and imaginary parts of the function.

E.g .

## Limit of $f(z)$ :

- A function is said to have the limit as approaches a point if for given small positive number we can find positive number such that for all in a disk ,we have  
Symbolically, we write

## Continuity of $f(z)$ :

A function  $f(z)$  is said to be continuous at  $z_0$  if  $f(z)$  is defined and

In other words if  $f(z)$  is continuous at  $z_0$  then  $f(z)$  and  $\overline{f(z)}$  both are continuous at  $z_0$  and conversely if  $f(z)$  and  $\overline{f(z)}$  both are continuous at  $z_0$  then  $f(z)$  is continuous at  $z_0$

# Function of complex variable(CO1)

## Differentiability of :

The derivative of a complex function at a point  $z_0$  is written as  $f'(z_0)$  and is defined by

provided limit exists.

$z_0$  is said to be differentiable at  $z_0$  if we write the change  $\Delta z$  since

## Analytic Functions:

- A single - valued complex function is said to be analytic at a point in the domain of the  $z$ - plane, if it is differentiable at and at every point in some neighbourhood of.
- Point where function is not analytic (i.e. it is not single valued or not) are called singular points or singularities.
- From the definition of analytic function
  - (1) To every point of  $D$ , corresponds a definite value of  $f(z)$ .
  - (2)  $f(z)$  is continuous function of  $z$  in the region  $D$ .
  - (3) At every point of  $D$  in  $D$ ,  $f(z)$  has a unique derivative.

## Cauchy-Riemann Equation:

- $f(z)$  is analytic in domain  $D$  if and only if the first partial derivative of  $u$  and  $v$  satisfy the two equations .....(1)

The equation (1) are called C-R equations.

### **Note :**

- If  $f(z)$  is analytic in a domain  $D$  , then  $u$  and  $v$  satisfy C-R equations at all points in  $D$ .
- C- R Condition are necessary but not sufficient.
- C- R Condition are sufficient if the first partial derivative of  $u$  and  $v$  are continuous and satisfy C- R Condition.

# Daily Quiz(CO1)

Q.1 Determine whether  $f(z)$  is analytic or not .

Q.2 Show that the function  $f(z)$  is an analytic function , find its derivative.

Q.3 Show that  $f(z)$  is analytic everywhere in the complex plane except at the origin and that its derivative is

Q.4 Show that the function  $f(z)$  is continuous everywhere but nowhere differentiable except at the origin .

Q.5 Show that the function defined by  $f(z)$  satisfy C-R equations at the origin but is not analytic at that point .

# Daily Quiz(CO1)

Q.6 Examine the nature of the function

in the region including the origin.

Q.7 Prove that the function is analytic and find its derivative.

## Polar form of C-R equation:

To find polar form of C – R equation

Proof: Let  $(r, \theta)$  be the polar coordinates of a point  $z$ .

Then,  $z = r(\cos \theta + j \sin \theta)$  so that

$$z = r(\cos \theta + j \sin \theta) \quad \text{.....(1)}$$

Thus  $r$  and  $\theta$  are now function of  $x$  and  $y$ .

Differentiating (1) partially w.r.t  $x$ , we get

$$\frac{\partial z}{\partial x} = \frac{\partial r}{\partial x}(\cos \theta + j \sin \theta) - r(\sin \theta \frac{\partial \theta}{\partial x} + j \cos \theta \frac{\partial \theta}{\partial x}) \quad \text{.....(2)}$$

# Function of complex variable (CO1)

Again differentiating (1) partially w.r.t  $z$ , we get

.....(3)

From (2) and (3)

Equating real and imaginary parts ,we get  
and

# Topic objective (CO1)

- We enable to find analytic function in terms of  $z$  if we have real or imaginary part of an analytic function.

# Function of complex variable(CO1)

## Laplace's equation:

An equation in two variables and given by is called as Laplace's equation in two variables.

# Function of complex variable(CO1)

**Harmonic functions:** If  $f(z)$  be an analytic function in some region  $R$ , then Cauchy-Riemann equations are satisfied. That implies

$$\dots\dots\dots(2)$$

Now, on differentiating (1) with respect to  $x$  and (2) with respect to  $y$ ,

we get

$$\dots\dots\dots(4)$$

# Function of complex variable(CO1)

Assuming that , adding equations (3) and (4) we get

Similarly, on differentiating (1) with respect to  $z$  and (2) with respect to  $\bar{z}$  and subtracting them we get

# Function of complex variable(CO1)

both  $u$  and  $v$  satisfy the Laplace's equation in two variables, therefore

$u$  is called as Harmonic function. This theory is known as Potential theory.

- If  $f = u + iv$  be an analytic function in which  $u$  is harmonic, then  $v$  is called as Harmonic conjugate of  $u$ .

## **Determination of Analytic function whose real or imaginary part is Known:**

If the real or the imaginary part of any analytic function is given, other part can be determined by using the following methods :

- (a) Direct Method
- (b) Milne-Thomson's Method
- (c) Exact Differential equation method
- (d) Shortcut Method

# Function of complex variable (CO1)

(a) **Direct Method:** Let  $f(z)$  is an analytic function. If  $u(x, y)$  is given, then we can find  $v(x, y)$  in following steps

**Step-I** Find  $v(x, y)$  by using C-R equation

**Step-II** Integrating  $u(x, y)$  with respect to  $x$  to find  $v(x, y)$  with taking integrating constant

**Step-III** Differentiate  $v(x, y)$  (from step-II) with respect to  $y$  Evaluate containing

# Function of complex variable (CO1)

**Step-IV** Find  $f(z)$  by using C-R equation

**Step-V** by comparing the result of  $f(z)$  from step-III and step-IV, evaluate

**Step-VI** Integrate  $f(z)$  and evaluate

**Step-VII** Substitute the value of  $f(z)$  in step-II and evaluate .

# Function of complex variable(CO1)

**Example:** If  $f(z)$  represents the analytic complex potential for an electric field and  $E_x, E_y$ , determine the function .

Solution: Given that

Hence

$$\dots\dots\dots(1)$$

Again,  $\dots\dots\dots(2)$

So,  $f(z)$  and  $\bar{f}(\bar{z})$  must satisfy the Cauchy's-Riemann equations:

$$\dots\dots\dots(4)$$

# Function of complex variable(CO1)

Now, from equations (2) and (3)

On integrating with respect to

Differentiating with respect to  
.....(5)

# Function of complex variable(CO1)

Again, from equations (1) and (4)

.....(6)

On comparing (5) and (6)

, So

Hence,

## Milne-Thomson's Method:

Let a complex variable function is given by

$$.....(1)$$

Where  $u$  and  $v$ ,

Now, on writing  $z$  in terms of  $u$  and  $v$

Considering this as a formal identity in the two variables  $u$  and  $v$ , and substituting

# Function of complex variable(CO1)

.....(2)

Equation (2) is same as the equation (1), if we replace  $z$  by  $x + iy$  and  $\bar{z}$  by  $x - iy$ .

Therefore, to express any function in terms of  $z$ , replace  $\bar{z}$  by  $x - iy$  and  $z$  by  $x + iy$ .

This is an elegant method of finding  $f(z)$ , ‘when its real part or imaginary

part is given’ and this method is known as Milne-Thomson’s Method.

# Function of complex variable(CO1)

**Example-1:** Find the analytic function , whose real part is . .

Solution: Let is an analytic function. Hence, from the question

Now , [by using C.R. equation]

Hence ,

by using Milne-Thomson's method (replacing by  $z$  and by  $0$ )

# Function of complex variable(CO1)

Hence ,

Therefore,

# Function of complex variable(CO1)

**Example-2:** Find the analytic function ,  
If .

Solution: Given that

$$\dots\dots\dots(1)$$

$$\dots\dots\dots(2)$$

On applying Cauchy-Riemann's theorem in equation (2)

$$\dots\dots\dots(3)$$

Now, from equations (1) and (3)  
and

# Function of complex variable(CO1)

Again ,  
By using Milne-Thomson's method

## Exact Differential equation Method:

Let  $f(z)$  be an analytic function .

**Case-I** If  $f(z)$  is given

We know that

[By C-R equations]

Let  $u(x,y)$ , therefore  $v(x,y)$  and

Again ,  $u(x,y)$  and  $v(x,y)$

# Function of complex variable(CO1)

Therefore  $[\because \text{ is a harmonic function}]$

[Satisfies the condition for exact differential equation]

Hence ,

# Function of complex variable (CO1)

**Case-II :** If is given

We know that

[By C-R equations]

Let , therefore and

Again , and

Therefore [  $\therefore$  is a harmonic function]

[Satisfies the condition for exact differential equation]

# Function of complex variable(CO1)

Hence ,

**Example-1:** If , determine for which is an analytic function .

**Solution:** Given that

By using exact differential equation method, can be written as

# Function of complex variable (CO1)

**Example-2 :** If  $f(z)$ , determine for which  $f(z)$  is an analytic function.

**Solution :** Given that

By using exact differential equation method, can be written as

Q.1. Show that the following functions are harmonic and find their harmonic conjugate functions. Also find the analytic function

(i) (ii)

Q.2. Show that the following functions are harmonic , and also find the analytic function

(i) (ii)

(iii)

# Daily Quiz(CO1)

Q.3. If  $u$  is harmonic function, find an analytic function  $f$  such that

Q.4. Find an analytic function  $f$  whose imaginary part is  $v$ .

Q.5. If  $u$  and  $v$  is an analytic function. Find  $f$  in terms of  $u$  and  $v$ .

# Recap(CO1)

- Complex variables.
- Curves and region in complex plane
- Limit
- Continuity
- Differentiability
- Analyticity
- Harmonic function
- Milne's Thomson Method

# Topic objective (CO1)

- Conformal mapping can be used in scattering and diffraction problems. For scattering and diffraction problem of plane electromagnetic waves, the mathematical problem involves finding a solution to scalar wave function which satisfies both boundary condition and radiation condition at infinity.

# Conformal Mapping (CO1)

**Conformal Mapping:** Mapping is a mathematical technique used to convert one mathematical problem and its solution into another. It involves the study of complex variables.

Let a complex variable function define in  $z$ -plane have to convert in another complex variable function define in  $w$  plane. This process is called conformal mapping.

# Conformal Mapping (CO1)

- Conformal mapping is a mathematical technique used to convert one mathematical problem and its solution into another preserving both angles and shape of infinites small figures but not necessarily their size.

## The necessary Condition for Conformal mapping:

- If  $w = f(z)$  represents a Conformal mapping of the domain  $D$  in the  $z$ -plane into a domain  $D'$  of the  $w$ -plane. Then  $f(z)$  is an analytic function in the domain  $D$ .

# Conformal Mapping(CO1)

**Example:** Determine and sketch the image of  $\mathbb{H}$  under the transformation .

**Solution:** let

Hence

Again from the question

, which represent a circle in  $\mathbb{H}$  plane.

# Conformal Mapping(CO1)

# Daily Quiz(CO1)

1. Find the image of  $\gamma$  under the transformation  $w = z + 1$ .
2. Find the image of the circle  $|z| = 1$  under the transformation  $w = z + 1$ .
3. For the conformal transformation  $w = z + 1$ , show that the coefficient of magnification at  $z = i$  is  $\sqrt{2}$ .
4. For the conformal transformation  $w = z + 1$ , show that the angle of rotation at  $z = i$  is  $0$ .

# Recap(CO1)

- Complex variables.
- Curves and region in complex plane
- Limit
- Continuity

# Topic objective(CO1)

- Bilinear Transformation is used for transforming an analog filter to a digital filter.

# Bilinear/Mobius Transformation(CO1)

**Bilinear Transformation:** A transformation of the form  $w = \frac{az + b}{cz + d}$ , where  $a, b, c, d$  are complex constants and  $ad - bc \neq 0$  is called a bilinear transformation.

Every bilinear transformation  $w = \frac{az + b}{cz + d}$  is the combination of the basic transformations

- I. Translation:
- II. Rotation:
- III. Magnification:
- IV. Inversion:

# Mobius Transformation(CO1)

**Cross-ratio:** let a set of point and its mappings are

Is called cross- ratio.

**Example.** Determine the bilinear transformation which maps the points onto Also, find the image of the unit circle

**Solution:** The bilinear transformation mapping onto respectively given by

# Mobius Transformation(CO1)

-(1)

Which is the required bilinear transformation.

# Mobius Transformation(CO1)

Eqn.(1), can be written as .

Now,

.

Hence the image of unit circle in  $z$ -plane is a straight line making an angle to  $u$ -axis and passing through origin in  $w$ -plane.

# Daily Quiz(CO1)

- Q1. Find the points of invariant of the transformation .
- Q2. Find the fixed points under the transformation .
- Q3. Find the bilinear transformations whose fixed points are 1 and 2.

# Weekly Assignment(CO1)

Q1. Determine whether  $f(z)$  is analytic or not .

Q2. Show that the function  $f(z)$  is an analytic function , find its derivative.

Q3. Show that  $f(z)$  is analytic everywhere in the complex plane except at the origin and that its derivative is

Q4. Show that the function  $f(z)$  is continuous everywhere but not differentiable except at the origin .

Q5. Show that the function defined by  $f(z)$  satisfy C-R equations at the origin but is not analytic at that point.

# Weekly Assignment(CO1)

Q6. Find an analytic function whose imaginary part is

Q7. If  $u$  and  $v$  is an analytic function . Find  $f$  in terms of

# Weekly Assignment(CO1)

Q8. Find the image of  $\gamma$  under the transformation .

Q9. Find the image of the circle  $\gamma$  under the transformation

.

Q10. For the conformal transformation  $w = f(z)$ , show that the coefficient of magnification at  $z_0$  is  $|f'(z_0)|$ .

Q11. For the conformal transformation  $w = f(z)$ , show that the angle of rotation at  $z_0$  is  $\arg f'(z_0)$ .

Q12. Find the points of invariant of the transformation  $w = f(z)$ .

Q13. Find the fixed points under the transformation  $w = f(z)$ .

Q14. Find the bilinear transformations whose fixed points are 1 and 2.

1.

A. Limit exists

**B. Limit does not exist**

C. Limit exists and equal to 1

D. None of these

2. If then

E. is continuous

F. is discontinuous at

**G. Both B & C**

3. Analytic function is also known as

A. Regular function

B. Holomorphic function

**C. Both A & B**

D. None of these

4. The harmonic conjugate of the function is

E. None of these

# Glossary Questions(CO1)

1. Pick the correct option from glossary:

(i)

(ii)

(iii)

A. Is analytic in entire complex plane except origin

B. Is analytic in entire complex plane

C. Has imaginary part

# Glossary Questions(CO1)

2. Pick the correct option from glossary:

(i)

(ii)

(iii)

(iv)

A. is not harmonic function

B. is harmonic function

C. is not harmonic function

D. is harmonic function

## **General Instructions:**

- This Question paper consists of 2 pages & 5 questions. It comprises of three Sections, A, B, and C.
- **Section A** -Question No- 1 is objective type questions carrying 1 mark each, Question No- 2 is very short answer type carrying 2 mark each. You are expected to answer them as directed.
- **Section B** - Question No-3 is short answer type questions carrying 5 marks each. You need to attempt any two out of three questions given.
- **Section C** -Question No. 4 & 5 Long answer type (within unit choice) questions carrying 6 marks each. You need to attempt any one-part *a* or *b*.

# First Sessional Paper

- No sheet should be left blank. Any written material after a blank sheet will not be evaluated/checked.
- **Blooms Level:** K1: Remember, K2: Understand, K3: Apply, K4: ~~Analyze~~, K5: Evaluate, K6: Create

# Third Sessional Paper

		<u>SECTION – A</u>	[8 Marks]	CO
		<b>1 Attempt all parts</b>	<b>(4×1=4)</b>	
	<b>a.</b>	The solution of PDE $\tilde{D} + 4\tilde{D}' + 5\tilde{D}''z = 0$ is (i) $z = e^{-5x} f_1 \tilde{y} - 4x\tilde{y} + xe^{-5x} f_2 \tilde{y} - 4x\tilde{y}$ (ii) $z = e^{-5x} f_1 \tilde{y} + 4x\tilde{y} + xe^{-5x} f_2 \tilde{y} + 4x\tilde{y}$ (iii) $z = e^{5x} f_1 \tilde{y} + 4x\tilde{y} + xe^{5x} f_2 \tilde{y} + 4x\tilde{y}$ (iv) None of these	<b>(1)</b>	<b>CO3</b>
	<b>b.</b>	PDE: $Bu_{xx} + Au_{xy} + Cu_{yy} + f(x, y, u, u_x, u_y) = 0$ is elliptic if _____	<b>(1)</b>	<b>CO3</b>
	<b>c.</b>	While solving a PDE using a Variable Separable method, we equate the ratio to a Constant which? (i) Can be Positive or Negative Integer or Zero (ii) Can be Positive or Negative rational number or Zero (iii) Must be a Positive Integer (iv) Must be a Negative Integer	<b>(1)</b>	<b>CO3</b>
	<b>d.</b>	$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0$ is two-dimensional heat equation in _____ state.	<b>(1)</b>	<b>CO3</b>

# Third Sessional Paper

<b>2.</b>	<b>Attempt all parts</b>	<b>(2×2=4)</b>	
	<b>a.</b> Find the P.I. of $\nabla^2 z - 2DD'z = \sin x \cdot \cos 2y$	<b>(2)</b>	<b>CO3</b>
	<b>b.</b> Classify the PDE: $y u_{xx} + \nabla x + y \nabla_{xy} + x u_{yy} = 0$ about the line $y = x$ .	<b>(2)</b>	<b>CO3</b>
<b><u>SECTION – B</u></b>		<b>[10 Marks]</b>	
<b>3.</b>	<b>Answer any <u>two</u> of the following-</b>	<b>[2×5=10]</b>	
	<b>a.</b> Solve the PDE $4 \frac{\partial u}{\partial x} + \frac{\partial u}{\partial y} = 3u$ subject to the condition $u(0, y) = 4e^{-y} - e^{-5y}$ by method of separation of variables.	<b>(5)</b>	<b>CO3</b>
	<b>b.</b> Solve the PDE: $\nabla^2 z + DD' - 6D^2 z = y \sin x$	<b>(5)</b>	<b>CO3</b>
	<b>c.</b> Solve the PDE: $\nabla^2 z - D'^2 - 3D + 3D \nabla z = xy + e^{x+2y}$	<b>(5)</b>	<b>CO3</b>

# Third Sessional Paper

<b>4</b>	<b>Answer any <u>one</u> of the following-</b>	<b>[2×6=12]</b>	
	<b>a.</b> A tightly stretched string with fixed end points $x = 0$ and $x = l$ is initially in a position is given by $y = y_0 \sin^3 \frac{\pi x}{l}$ . If it released from rest from this position, find the displacement $y(x, t)$	<b>(6)</b>	<b>CO3</b>
	<b>b.</b> Solve the PDE $\frac{\partial^2 u}{\partial y^2} + \frac{\partial u}{\partial x} = 0$ subject to the condition: $u(x, 0) = 0, u(x, \pi) = 0, u(0, y) = 4 \sin 3y$ by method of separation of variables.	<b>(6)</b>	<b>CO3</b>
<b>5.</b>	<b>Answer any <u>one</u> of the following-</b>		
	<b>a.</b> Find the temperature of the bar of length 2 whose ends are kept at zero and internal surface insulated by if the initial temperature is $\sin \frac{\pi x}{2} + 3 \sin \frac{5\pi x}{2}$ .	<b>(6)</b>	<b>CO3</b>
	<b>b.</b> Find the solution of Laplace equation subject to the condition: $u(0, y) = u(1, y) = u(x, 0) = 0, u(x, 1) = 100 \sin \pi x$	<b>(6)</b>	<b>CO3</b>

# Expected Questions (CO1)

- Q1. If  $f(z)$  is a regular function of  $z$ , prove that  $f(z)$  is analytic.
- Q2. If  $f(z)$  and  $g(z)$  are analytic functions, find  $f(z)g(z)$  in terms of  $f(z)$  and  $g(z)$ .
- Q3. Find the bilinear transformation which maps the points  $z_1, z_2, z_3$  into the points  $w_1, w_2, w_3$  respectively.
- Q4. Consider the transformation  $w = \frac{z - z_0}{z - z_1}$  and determine the region of  $w$ -plane corresponding to rectangular region bounded by the lines  $x = a, x = b, y = c, y = d$  in  $z$ -plane.

# Recap of Unit

- Functions of complex variable
- Limit, Continuity and differentiability
- Analytic functions
- Cauchy- Riemann equations (Cartesian and Polar form),
- Harmonic function
- Method to find Analytic functions
- Conformal mapping
- Mobius transformation and their properties.
